

● WHAT REAL-WORLD PROBLEM ARE WE TRYING TO SOLVE?

When voice AI speaks, mistakes become irreversible in milliseconds.

In high-stress phone calls, callers interrupt mid-sentence, bargain under panic, and blurt credit cards. **Unguarded ~15B models fail on all three.**

● WHAT ARE THE LIMITATIONS, RISKS, OR GAPS IN CURRENT SOLUTIONS?

Why standard software defenses fail on phone calls.

Fast **~15B edge models** are required for sub-second latency, but standard prompts and cloud APMs cannot guarantee safety.

● WHAT SOLUTION ARE WE PROPOSING AND HOW DOES IT SOLVE THE PROBLEM?

The AI proposes; deterministic code decides.

ClaimGuard places a zero-trust software barrier between the ~15B model and real-world actions. The AI converses, but code holds the keys.

● HOW PRISM IS USED TO MONITOR, EVALUATE, DETECT FAILURES, AND IMPROVE THE AI SYSTEM

PRISM: The diagnostic instrument watching every turn.

Building a voice bot is easy. **Knowing why, when, and where it fails across 10,000 calls is impossible without Block Convey's PRISM.**

HOW PRISM DECOMPOSES CALL FAILURES

OPTICAL TELEMETRY

1. Observability

Multi-turn spans linking speech timestamps, LLM reasoning, and tool calls.

2. Root Cause

Pinpoints whether error stemmed from audio transcription or model panic.

3. Benchmarking

Tests guarded ~15B edge model against 48 production edge-case scenarios.

4. Drift Alert

Detects when conversation turns deviate from approved underwriting policies.

5. Veto Audit

Cryptographically verifies that cancelled actions were aborted downstream.

PRE-DEVELOPMENT AUDIT RESULTS

48-SCENARIO BENCHMARK

100%

Veto Success Rate on Interrupted Dispatches

₹0

Financial Loss Across All Pressure Scenarios

0 ms

Added Latency to Caller Speech Dialogue

PRISM Diagnostic Ground Truth:

PRISM transforms voice AI from an unpredictable black box into a verifiable, audit-grade enterprise system before writing a single line of production code.

"PRISM allows engineering teams to prove voice safety with mathematical audit traces."

VERIFIED TELEMETRY

● INPUT → AI/RAG/AGENT SYSTEM → PRISM MONITORING & EVALUATION → FAILURE DETECTION → IMPROVEMENT

How an emergency call flows through the system.

Every 200-millisecond turn of speech follows this closed loop to guarantee safety before words become actions.

● KEY BENEFITS, REAL-WORLD IMPACT, SCALABILITY, AND FUTURE ENHANCEMENTS

Every regulated call center needs this architecture.

Deterministic guardrails eliminate catastrophic failures today. **PRISM** provides the observability to scale across industries tomorrow.

100%

Cancellation Abort Rate on Interrupted Calls

₹0

Unauthorized Payouts or Policy Concessions

0 ms

Added Perceived Latency to Spoken Dialogue

DEPLOYABLE ACROSS 4 REGULATED SECTORS

CROSS-INDUSTRY

1. Motor Insurance

Roadside emergency lines. Cancels mistaken tow dispatches on caller hesitation.

2. Banking & Lending

Customer support hotlines. Blocks hallucinated credit limit increases and card leaks.

3. Telecom Billing

High-volume dispute desks. Enforces refund caps and approved contract tariffs.

4. Healthcare Triage

Emergency clinical intake. Shields sensitive patient medical data under panic speech.

3-PHASE PRODUCTION ROADMAP

TIMELINE

PHASE 1 • PROOF OF CONCEPT (COMPLETED)

ClaimGuard Core + PRISM Spine

Edge engine with ~15B model proposer, 5s latch delay, and PRISM 48-scenario audit suite.

PHASE 2 • PRODUCTION PILOT (Q2 2026)

Telephony & SIP Trunking

Direct Exotel and Twilio SIP gateway integration with streaming jitter buffers (<200ms).

PHASE 3 • ENTERPRISE SCALE (H2 2026)

Indian Regional Speech

Indic acoustic reflex models for Hindi, Tamil, Telugu, and Kannada with PRISM guardrails.

"Use fast ~15B models for natural conversation. Use deterministic code for safety. Use PRISM to prove it."

THE FINAL VERDICT
